Project: TreeSim

Issues/Agreement:

- The system's purpose is to help visualize algorithms in computer science, particularly those involving trees and graphs.

- All system inputs are to be received through the touchscreen of the device.

- The system's outputs are an interactive demonstration and non-interactive visual demonstration.

- The system will keep usage records of its provided algorithms per device installed.

- The system will not provide automated functionality for automated collection of usage records from multiple devices.

- The system will not require a network connection for any of its functionalities once installed.

Outcome: Accept
